Subject: RE: Meeting with OTAW re. eRINs

Chris,

I'm not entirely sure who will join, but I believe the following will be in attendance:

Kyle Borgert, Assessment and Standards Division
Robert Anderson, Compliance Division
Kurt Gustafson, Compliance Division
Diana Galperin, Transportation and Climate Division

Possibly a few other folks from CD as well.

Hi Kyle - here are the people(below) that I expect to join the meeting on Thursday at 4pm. do you have any sense for EPA people that may participate, beside you and Paul? Thanks, Chriss

Paul Gilman, Chief Sustainability Officer Covanta
Paula Soos, VP Government Relations Covanta
Bob Cleaves, Renewable Fuel Coalition and Biomass Power Association
Mike Van Brunt, Vice President Environmental Permitting and Sustainability
Chris Miller, AJW
Darwin Baas, Kent County Michigan, Director Department of Public Works
Michelle Marsh, Director Lancaster County Solid Waste Authority (PA)
Dave Vollero, York County Pennsylvania Solid Authority

Chris,

My understanding is that Sarah and Ben have asked the Assessment and Standards Division (Director Bill Charmley) to handle this meeting. ASD is leading the eRIN rulemaking process and thus my and Paul Machiele's involvement (Fuel Center). Not a silly question at all. Hopefully that clears things up a bit on your end, but feel free to give me a call Ex. 6 Personal Privacy (PP) if necessary.

Thanks,
Kyle

Subject: Paul Gilman/Covanta et al mtg request

Hi Joe - Paul Gilman, VP at (client) Covanta Energy, and formerly EPA ORD AA (2002-2004), would very much like to arrange a virtual meeting with you sometime in the first few weeks of March, to which he would bring Paula Soos, Manning Feraci (consultant), me and 2 or 3 local governments from PA and MI who own and/or co-operate waste to energy (WTE) facilities with the company. The topic would be the path forward on eRINs and WTE's role in generating them.

Thanks for considering,
Chris

Ben and Courtney, thank you for a great meeting today. We were grateful for your time and for your sharing what you could about your work on the electricity program. Please pass along our thanks to the team!

I wanted to be sure you and the team were aware of this letter sent by Sen. Shaheen and Sen. Collins to Administrator Regan last week: <https://www.shaheen.senate.gov/news/press/shaheen-collins-issue-bipartisan-call-to-epa-to-diversify-fuel-supply-to-ease-rising-energy-costs>

Thanks again, and please don't hesitate to reach out if you have any questions related to our industries, EJ, or anything else.

Best,
Carrie

We have some ESP going, Ben -- I was about to email you. My team and I have been working on some new materials for you. Do you have a few minutes for me to ask a few clarifying questions this week? Just need like 10.

In the meantime, yes: the 2016 comments would still be quasi-representative. Ultimately, our view is that there should be a way for EPA to include three major stakeholders in the RIN value chain/ generation process -- the biogas producer, EV OEMs, and EV charging station networks -- that is still simple for EPA to administer. We also believe industry would broadly support an approach like that.

I want to provide more generic documents that outline a few different possible approaches to RIN generation (not just the one we've proposed), but for now, I've attached here three documents we've shared with EPA in the past.

- **BTR ERIN Summary Visuals.** This provides a distilled summary of what we've previously proposed to EPA.
- **RIN Generating Protocol.** I know this is a longer document, but in terms of information regarding one potential approach to RIN generation, this is the most detailed description we've prepared. This is what was actually included in one of our applications to EPA. There are several ways we could simplify what's included in this, which we will cover in the generic materials we're preparing.
- **BTR-EPA Presentation.** This is what we presented to EPA last year. This provides a summary of geofencing and how we envision establishing a connection between electricity generation and EV charging.

Ultimately, the approach covered in these materials can likely be simplified, though I do believe using charging geofencing and then relying on a strong QAP to enable both EV OEMs and charging station networks to provide data for RIN generation -- without significant administrative burden -- is something EPA should consider.

Let me know about a quick call, and then we'll follow-up with more on alternative approaches that have other advantages/ disadvantages compared to this one.

And 100% let's connect in DC. I will make a trip up so we can spend some time together.

Thanks,
Jack

Ben -- ahead of our call Thursday, I wanted to send you some quick notes in response to your question re. EJ concerns about dairy (or other livestock) participation in RFS. Also, if you know Sam Wade

- **LCFS petitions:** you have likely seen these, but I'm attaching the cover letter and petition that several organizations submitted to CARB regarding livestock ag participation in LCFS. The arguments against it -- which I think will be analogous to arguments in RFS -- distill down to:
 - Programs like LCFS and RFS incentivize dairies to grow (more cows) simply to produce more methane to increase the value captured under those programs.
 - Programs like LCFS and RFS motivate industry consolidation, as digester tech and therefore LCFS and RFS are more valuable for larger dairies. (I believe this is the most compelling of the criticisms. More below.)
 - Dairy and animal ag operations should not exist. The EJ advocates don't really propose alternatives to digesters as a way to address methane emissions, other than that dairies and other animal ag operations should cease to operate.
- **CARB response:** CARB has rejected multiple petitions on this topic. The full history and CARB's responses can be found here: <https://ww2.arb.ca.gov/resources/documents/2021-lcfs-petition>. The RNG Coalition also had a good response to the petition in a letter here: <https://www.arb.ca.gov/lists/com-attach/53-dairywkshp220329-ws-AmFUPVY6UG4EZwRq.pdf>. CARB's and the RNG Coalition's responses include key points of rebuttal that would be relevant in the RFS, as well:
 - "Dairies exist to produce milk, not methane" (from the RNG Coalition letter below).
 - Dairy digesters are needed to address methane emissions. Digesters have contributed significantly to the methane emissions reductions achieved in CA, and without digesters, the State will clearly not meet its goals.
 - Industry consolidation happens with or without LCFS.
- **Making it work for small farms:** one important and valid criticism (in my opinion) is that fuels programs work better for big dairies compared to small dairies. There are real economies of scale -- large dairies go through the same certification process as small dairies, etc etc -- and therefore larger farms are better positioned to benefit from LCFS/ RFS. This is an issue, as it does support the argument that LCFS/ RFS encourage consolidation. I would suggest that EPA consider this and ensure that smaller dairies have a way to participate fully/ expediently in the RFS, including potentially through aggregators. That will nullify one potential EJ concern.

Hope this is helpful! Talk to you soon.

Dear Principal Deputy Assistant Administrator Goffman (Joe),

The members of the RFS Power Coalition - Biomass Power Association, American Biogas Council and Covanta – request the opportunity to meet with you at your earliest availability to

discuss the rule that the EPA is planning to propose that will finally establish implementing regulations for the generation of credits (RINs) for pathways that generate electricity under the Renewable Fuel Standard Program. We would be happy to meet with you in person or alternatively host a meeting with our group over Zoom or another video meeting platform that works for you.

Our members generate electricity from RFS-qualifying feedstocks and as you are probably aware, we have been working for a number of years to get both existing and new qualifying pathways and facilities authorized to generate RINs under the program. We want to make sure that, as the Agency prepares to propose these regulations, the Agency is fully aware of not only the importance of this rule to our members but also the importance of how the rule is constructed. We appreciated your time earlier this year and wanted to follow up on our previous meeting and our offer to provide information to assist the Agency in developing the proposed rule. (Additional Background available on our website at www.rfspower.com).

Please let us know what dates and times you are available over the next few weeks for a meeting. Our group will make sure we make arrangements to accommodate your schedule?

Thanks very much.
